Conductivity Electrode

LRG 16-9

Description

The conductivity electrode LRG 16-9 together with the conductivity switch LRS 1-.. or conductivity controller LRR 1-.. is designed for measuring and monitoring electrical conductivity in conductive fluids.

If used as conductivity limiter or continuous blowdown controller in steam boilers, the conductivity electrode LRG 16-9 can be used with the following equipment:

Conductivity switch LRS 1-7, LRS 1-50,
Conductivity controller LRR 1-50, LRR 1-52

Function

The conductivity electrode LRG 16-9 is used in combination with the following equipment as conductivity limiter and continuous blowdown controller in steam boilers:

**Conductivity switch LRS 1-7, LRS 1-50,
Conductivity controller LRR 1-50, LRR 1-52.**

In addition the equipment can monitor conductivity in condensate and feedwater systems and in cooling and cleaning water.

The conductivity electrode LRG 16-9 in conjunction with conductivity switch LRS 1-7 is also approved for feedwater monitoring on board of seagoing vessels.

The conductivity electrode works in conjunction with conductivity switches or controllers and monitors the conductivity in conductive fluids.

To measure the fluid temperature a resistance thermometer Pt 100 is integrated in the electrode.

A short circuit or wire breakage in the conductivity electrode will trigger an error message in the conductivity switch or controller.

Directives and standards

EC Pressure Equipment Directive 97/23/EC

The conductivity control and monitoring equipment LRG 1-.., LRS 1-5.., LRR 1-5.. meets the safety requirements of the Pressure Equipment Directive (PED). The conductivity control & monitoring equipment is EC type approved according to EN 12952/EN 12953. These Directives state, among other things, the requirements made on limiting systems and equipment for steam boiler plants and (pressurised) hot-water installations.

VdTÜV Bulletin "Water Monitoring 100"

The conductivity electrode LRG 16-9 in conjunction with the following conductivity switches and controllers is type approved according to VdTÜV Bulletin "Water Level 100": LRS 1-7, LRS 1-50, LRR 1-50 and LRR 1-52.

Type approval: TÜV · WÜL · 09-014, 12-017, 12-018. The VdTÜV Bulletin "Water Monitoring 100" states the requirements made on water monitoring equipment.

Approvals for Marine Applications

The conductivity electrode LRG 16-9 in conjunction with conductivity switch LRS 1-7 is approved for feedwater monitoring on seagoing vessels.

Germanischer Lloyd 60444-09 HH

ATEX (Atmosphère Explosible)

The equipment constitutes a simple item of electrical equipment as defined in DIN EN 50020 section 5.4. According to the European Directive 94/9/EC the equipment must be equipped with approved Zener barriers if used in potentially explosive areas. Applicable in Ex zones 1, 2 (1999/92/EC). The equipment does not bear an Ex marking. The suitability of the Zener barriers is certified in a separate wiring diagram.

UL/cUL (CSA) Approval

The equipment meets the requirements of: UL 508 and CSA C22.2 No. 14-13, Standards for Industrial Control Equipment. File E243189

Technical data

Service pressure

PN 40, max. 32 bar at 238 °C

Mechanical connection

Screwed G ½ A, ISO 228

Cell constant

0.5 cm⁻¹

Materials

Screw-in body: 1.4571, X6CrNiMoTi17-12-2

Measuring electrode: 1.4571, X6CrNiMoTi17-12-2

Electrode rod insulation: PTFE

Electrical connection

M 12 sensor connector, 5 poles, A coded

Protection

IP 65 to DIN EN 60529

Ambient temperature at terminal box

Max. 80 °C

Weight

Approx. 0.3 kg

Approvals

TÜV type approvals acc. to VdTÜV Bulletin "Water Monitoring 100": Requirements made on water level monitoring equipment Type approval: TÜV · WÜL · XX-014, XX-017, XX-018.

UL/cUL (CSA) Approval: UL 508 and CSA C22.2 No. 14-13, Standards for Industrial Control Equipment. File E243189.

Marine applications: GL 60444-09 HH

Important Notes

Installation

The conductivity electrode is designed for installation in pipes. The conductivity electrode is installed in a socket end, a measuring chamber or a mounting flange. Measuring chamber and mounting flange available as optional extra.

Electrical connection

The conductivity electrode LRG 16-9 is equipped with M 12 sensor plug-in connectors with 5 poles, A coded. For connecting the electrode preconfigured control cable assemblies (with male and female connectors) of various lengths are available as add-on equipment.

Note that the recommended control cable is not UV-resistant and, if installed outdoors, must be protected by a UV-resistant plastic tube or cable duct.

If you do not use the prefabricated control cable assembly, use screened five-core control cable, e. g. LiYCY 5 x 0.5 mm², for connecting the equipment. In addition, connect at the electrode end a screened female connector to the control cable.

Max. cable length between conductivity electrode and switch or controller: 30 m, with conductivities from 1 to 10 µS/cm: max. 10 m.

Make sure that connecting cables leading to the equipment are segregated and run separately from power cables.

Technical drawing of the LRG 16-9 tool, showing its dimensions and components. The tool consists of a long shaft with a handle at the top, a central section, and a threaded section at the bottom. Dimensions include a total length of approximately 187 mm, a handle length of 43 mm, and a threaded section length of 27 mm A. F. The handle has a diameter of Ø18 mm and the threaded section has a diameter of Ø26 mm. The threaded section is labeled G 1/2 A, ISO 228. The tool is labeled LRG 16-9.

Conductivity Electrode LRG 16-9

Important Notes

Installation

- The conductivity electrode alone or together with the measuring transducer ORGG 12/22 is mounted in a bypass below the main line. This arrangement prevents gas bubbles and flash steam from reaching the equipment. Please see also data sheet for OR 52-5 / OR 52-6.
- A throttling point, e. g. a non-return valve (GESTRA type RK 86) should be installed in the main line.
- To prevent air and dirt particles from getting into the bypass make sure that the bypass is below the main line.
